

# THE SUN

The sun is a very big and hot star. It's so big that you could fit over a million Earths inside of it! The sun is important because it gives us light and heat. Without the sun, Earth would be very cold and dark.

During the day, the sun shines down on us and makes everything bright. But did you know that the sun is also important at night? The sun's light reflects off of the moon, which is why the moon can sometimes look very bright in the sky.

What is the sun?
