

SOLAR SYSTEM

colouring book

MARS

Mars is the fourth planet from the sun. It is the second closest planet to Earth and the fourth smallest planet in Solar System. Mars is half the size of earth and has two moons. It is called the 'red planet' due to rust on its surface. Mars has largest volcano and deepest canyon.

NEPTUNE

Neptune is the eighth and farthest planet from the sun. It is 2.8 billion miles away from the sun.

Neptune is the third largest planet in the Solar System. Neptune is a gas giant planet composed of hydrogen, helium and methane. It has a small rocky core.

EARTH

Earth is the third planet from the sun and is 93 million miles away from it. It is a terrestrial planet that is able to sustain life. Earth has a diverse range of environments including land masses, oceans and atmosphere.

JUPITER

Jupiter is the fifth planet from the sun. It is the largest planet in the solar system. Jupiter is a gas giant planet composed of hydrogen and helium. It is bigger than all other planets combined. Jupiter has 79 moons.

SATURN

Saturn is the sixth planet from the sun. It is the second largest planet in the Solar System. Saturn is a gas giant and is composed of hydrogen and helium. It has a small rocky core. Saturn has 82 moons!

URANUS

Uranus is the seventh planet from the sun. it is the third largest planet in the solar system. Uranus is a gas giant composed of hydrogen, helium and methane. The methane gives it its distinctive blue-green color. Uranus has 27 moons.

MERCURY

Mercury is the smallest planet in the solar system. It is the closest planet to the sun and it has a solid surface. Mercury is a heavily cratered surface with many cliffs and valleys. It is one of the coldest planets and it has no moons.

VENUS

Venus is the second planet from the sun and is 67 million miles away from it. Venus is the Closest planet to Earth. Venus' atmosphere is composed of carbon dioxide and clouds of sulfuric acid. It is the hottest planet, reaching temperatures of 864°F. Venus has no moons.
